

The C.U. Ethics in Mathematics Society presents:

William Binney

Arjen Kamphuis

THE DANGERS OF SUCCESS

William Binney is a cryptomathematician and former employee of the NSA. He designed the privacy-conscious surveillance program ThinThread. After more than 30 years with the agency, he resigned in protest and became a whistleblower, exposing the massive waste in expenditure, and privacy violations, in the NSA's new Trailblazer surveillance program. He is the recipient of numerous awards for social justice, including the Joe A. Callaway Award for Civic Courage, and the Sam Adams Award for Integrity in Intelligence.

Arjen Kamphuis worked for IBM as an IT-architect in the '90's. From 2002 to 2010 he advised several European countries on IT-strategy, opensource and open standards. Since 2006 he has helped secure the information systems of corporates, national government and NGO's. His work ranges from regular privacy-compliance and security-awareness up to countering espionage against companies, journalists and governments. To keep up technically Arjen is involved with the global hacker-scene and keeps in touch with (former)employees of spy agencies and other professionals who work at the front of critical infrastructure protection.

Thursday 12 October 2017
17:30-18:30
